INTERRAGATOR II GPR SYSTEM*

Part #	Description
GPR200	INTERRAGATOR II system

**Teamed up with conventional locating techniques, the INTERRAGATOR® II GPR improves accuracy in locating buried utilities. The system rapidly maps the depth and location information of utilities as small as .8" (2.0 cm) down to 18" (46 cm) deep, and larger utilities down to 20' (6.1 m) deep (depth varies according to soil conditions).*

**The Remote Lockout System is a two-way communication and control tool that allows workers to lock out the drill anywhere along the bore path or at the exit site. Designed to prevent injury from unexpected drill string operation, an operator utilizes the system prior to entering the exit pit, working on or near the drill string, changing tooling, attaching product or manually adding/removing drill stem.*
